

Multiple Battery - Charging, Conditioning and Maintenance Systems

Pulse Charger / World Version PLUS (20 Amp)

20-Amp Charger Recovers Batteries Thought to be Dead and Useless

Finally, there is a way you can recover many dead lead-acid batteries that up until now were thought to be beyond saving. Presenting the Pulse Charger/World Version PLUS, the most effective battery charger available.

Features include:

- State-of-the-art charging system (up to 20 amps) works with all 12-volt lead-acid batteries
- Improves battery performance and increases battery life
- Recovers many dead and problem batteries by cleaning damaging lead-sulfate deposits off the battery plates
- Voltage regulated and microprocessor controlled
- Charges each 12-volt battery to its optimum level by monitoring the battery and adjusting the charging current accordingly
- Will not harm your battery
- Helps protect the environment
- One-year limited warranty

WC2200

Specifications

Output: 12VDC/20A dc
Input: 100-250 ac, 4A, 50-60 HZ
Overcharge Protection: 100%
Reverse Polarity Protection
Connections: heavy-duty output cables w/industrial plier-type battery clamps
Shipping Information (including box): Weight - 12 lbs, Size - 18"X18"X12"

12 Station HD Mobile Commercial Duty Charger

The SC Pallet Charger is a revolutionary advancement in multiple battery charging. It offers flexibility in charging that is unparalleled in the industry with 12 independent charging channels secured inside an HPX plastic roll-around cabinet. This "state of the art" charger actually interrogates the battery and profiles it prior to beginning the pulse charge sequence. This is the key to successful recovery of heavily discharged and sulfated batteries--applying the patented high frequency pulse coupled with the correct charge current. It doesn't matter what type of battery you may have, i.e., flooded, AGM or GEL; or the amperage of all 12 batteries attached to the SC Pallet Charger because it deals with each battery individually.

Features Include:

- World Voltage Capable
- Connect to a single battery or twelve - the operation is the same.
- Spark Free
- Patented Pulse Maintenance Technology recovers many batteries thought to be beyond recovery.
- Easy to read LED User Interface: displays the condition of the battery during the recovery and recharge cycle.

This technology breakthrough has been successfully used in many military battery shops around the world with tremendous results. The introduction of the SC Pallet Charger into the battery industry is the simplest and most effective way to charge multiple batteries.

746X810

Specifications

Input Electrical: 100-250 VAC; 15-7.5A; 50-60 Hz
Output Electrical: 12V 8.0A dc per output, High Pulsing to Desulfate
Charge Sequence: Detect battery, Determine condition, Recovery Charge (if required), Bulk charge, Absorption Charge, Float Charge
Display: 5 LEDs per charging channel that indicate - battery disconnected, bad battery, recovery charge, pulse charge, charge complete, reverse polarity, and over temperature.
